

3. (Amended) The cleaning device of claim [1] 10, wherein said housing is substantially cylindrical in shape.

6. (Amended) The cleaning device of claim [1] 10, wherein said cap is removably attached to said housing.

2. (Amended) The cleaning device of claim [1] 10, wherein said [seal] flexible and resilient member is fixed to said cap.

3. (Amended) The cleaning device of claim [1] 10, wherein said valve includes a bias spring disposed between said valve stem and said housing and resiliently urging said valve stem to a normal closed position of the valve, said valve stem being manually movable against the urging of said bias spring to an open position accommodating flow of fluid from the reservoir to the scrubbing medium.

4. (Amended) The cleaning device of [1] 10, wherein said housing is formed of a light-transmitting material.

10. (Twice Amended) A fluid-containing cleaning device comprising:  
an open-top housing defining a fluid reservoir and having a central axis,  
a scrubbing medium carried by the housing,  
a valve carried by the housing for providing communication between the reservoir and the scrubbing medium and having a valve stem extending through the reservoir,  
an enlarged actuator member connected to said valve stem and having a lateral extent substantially greater than that of the stem,  
a cap forming a top wall of the housing extending transversely of the axis for closing the
